Five Flagship Applications Roadmap and Global Expansion Blueprint

JokogSphere1 | SkillSphereHub2 | JokogWealthNexus
JokogDigitalWorkProof | JokogConnect

2026 to 2036 strategic direction

Founder and Principal Visioneer
Ogunleye Kolawole Joseph

Connecting People. Creating Opportunities. Building Generations.

Build Once. Use Everywhere. Secure Everywhere.

EXECUTIVE DIRECTION

Purpose and Strategic Conclusion

JOKOG DIGITAL ECOSYSTEMS LIMITED is building a connected portfolio of five distinct applications that address everyday commerce, education, financial capability, trustworthy work records and social problem-solving. The company has moved beyond the stage of having isolated ideas: four applications have working Pi-focused products and verified Testnet activity, while JokogConnect has now been approved as the fifth flagship at concept and brand stage.

The immediate strategic conclusion is to protect the four submitted applications from unnecessary production changes while Pi review and wallet-related processes continue; complete the formal specification, policies, architecture and launch materials for public expansion; and design JokogConnect on paper before committing development credits. Expansion should remain compliance-led, measurable and modular.

What the Five Flagships Create Together

Human need	Primary solution	Flagship
Buy, sell and obtain services	Border-ready digital marketplace	JokogSphere1
Learn practical skills and earn evidence	Flexible learning, assessment and certification	SkillSphereHub2
Build financial knowledge and discipline	Practical wealth education	JokogWealthNexus
Record and evidence completed work	Structured work records and counterparty confirmation	JokogDigitalWorkProof
Express needs, find help and form communities	Social utility, communication and solution matching	JokogConnect

Core Operating Doctrine

- Compliance first, followed by verification, submission, approval, stabilization and expansion.
- Build reusable capabilities once, but preserve each product's identity, security, payment and regulatory boundaries.
- Use one preview-quality assurance cycle and one controlled production deployment wherever practical, protecting development credits.
- Expand technology before physical offices; add infrastructure only when users, compliance, revenue and support demand justify it.
- Keep Pi-facing payment experiences separate from future public fiat or approved digital-asset channels.

PORTFOLIO POSITION

Where the Five Applications Stand as of 21 October 2026

Application	Current position	Next controlled milestone
JokogSphere1	Testnet implementation and transaction exercises completed; Mainnet configuration advanced; domain validation and wallet or ecosystem-listing dependencies remain under review.	Preserve the submitted build, resolve portal dependencies when available, then complete controlled Mainnet readiness confirmation.
SkillSphereHub2	Core learning, assessment, certificate, instructor and Pi payment flows are implemented. Security and sign-in fixes were published; listing or review status remains dependent on the Pi portal.	Maintain stability during review. After approval and before broad public launch, implement the Hybrid Learning and Verified Classroom System.
JokogWealthNexus	Learner, educator, classroom and financial-education functions are implemented. Testnet U2A and five A2U transactions were completed; certificate and security controls were strengthened.	Complete the remaining Mainnet readiness confirmation after portal and wallet conditions permit, then prepare a controlled public pilot.
JokogDigitalWorkProof	Core records, milestones, evidence, counterparty confirmation and admin oversight are implemented. Testnet sign-in and five unique A2U transactions were completed. Validation files are live.	Protect the reviewed configuration, complete Mainnet confirmation and prepare organizational features and public monetization only after clearance.
JokogConnect	Name, strategic purpose and logo approved as the fifth flagship. The platform is at specification and blueprint stage; no production build has started.	Approve product requirements, safety policies, architecture, revenue rules and phased minimum viable product before development.

Status discipline. Review labels and portal conditions can change. This blueprint records the company's operational position and planned direction; it does not represent approval by Pi Core Team or any regulator.

Portfolio Maturity View

Stage	Sphere1	Skills	Wealth	WorkProof	Connect
Concept approved	Complete	Complete	Complete	Complete	Complete
Core product built	Complete	Complete	Complete	Complete	Planned
Testnet utility exercised	Complete	Complete	Complete	Complete	Not started
Mainnet or platform clearance	Awaiting	Awaiting	Awaiting	Awaiting	Future decision

Public global expansion	Prepared on paper	Prepared on paper	Prepared on paper	Prepared on paper	Blueprint stage
-------------------------	-------------------	-------------------	-------------------	-------------------	-----------------

CONNECTED ECOSYSTEM

Five Independent Products One Coordinated Journey

Each flagship solves a defined problem and can operate independently. Interconnection is introduced only where it gives users a clear benefit and where consent, security and applicable platform rules permit it. JokogConnect becomes the discovery and community layer; the other four applications remain specialist utility destinations.

From	User intention	Connected destination	Value created
JokogConnect	Find a product or service	JokogSphere1	Discovery becomes a structured marketplace transaction.
JokogConnect	Develop a skill	SkillSphereHub2	Community interest becomes guided learning and certification.
JokogConnect	Improve money knowledge	JokogWealthNexus	General discussion becomes responsible financial education.
JokogConnect	Show completed work	JokogDigitalWorkProof	A claim becomes a structured, evidence-supported record.
SkillSphereHub2	Apply a certified skill	WorkProof and Sphere1	Learning can support a portfolio, service offering or verified work history.
JokogSphere1	Assess a service provider	WorkProof	A buyer can review permissioned work evidence before engagement.
JokogWealthNexus	Build enterprise discipline	Sphere1 and Skills	Education can lead to trade, professional learning and sustainable enterprise.

Interconnectivity Rules

- No application receives unrestricted access to another application's database.
- Users choose whether eligible profile, certificate, listing or work-record information is shared.
- Sensitive records remain private by default and are shared through permissioned links or explicit consent.

- Payments, wallets, settlement records and production credentials remain separated by environment and product.
- Cross-application analytics should be aggregated or consent-based and governed by privacy controls.
- Every referral must explain when a user is leaving one application and entering another.

Shared Digital Infrastructure

Reusable capability	Shared purpose	Boundary
Identity and account services	Reduce repeated onboarding where permitted.	No silent account linkage; platform-specific authentication remains authoritative.
Profiles and verification	Reuse approved public profile and credential data.	Only eligible fields move with user permission.
Notifications and support	Consistent messages, help and escalation.	Product-specific records and cases remain controlled.
Analytics and reporting	Understand adoption, conversion and service quality.	Minimize personal data and restrict privileged access.
Security controls	Common logging, monitoring and incident standards.	Separate secrets, keys, roles and production environments.
API and integration layer	Controlled communication among services.	Documented scopes, rate limits, audit trails and revocation.

FLAGSHIP ONE

JokogSphere1

Global commerce and digital marketplace

Global Purpose

JokogSphere1 is intended to help individuals, merchants, professionals and organizations discover, buy and sell legitimate goods and services across locations. Its long-term position is an inclusive global marketplace covering everyday products, professional services, digital goods, logistics-enabled trade and business discovery.

Global Utility and Expansion

- Expand category coverage from selected goods and services into a broad, governed marketplace.
- Introduce location, language, currency-display, tax and delivery logic by country.

- Support merchant onboarding, storefronts, inventory, service quotations, order tracking and dispute handling.
- Build regional logistics and payment partnerships instead of owning every operational layer.
- Add business procurement and institutional purchasing capabilities after consumer marketplace stability.

Revenue Generation

Revenue channel	How it works	Control required
Transaction commission	A disclosed percentage or fixed fee on completed marketplace transactions.	Clear pricing, refunds, reconciliation and tax treatment.
Merchant subscriptions	Paid plans for enhanced storefront, catalogue, analytics and management tools.	Free basic access may remain available to support adoption.
Featured placement	Clearly labelled sponsored listings or category promotion.	Fair ranking rules and advertising disclosure.
Service and logistics partnerships	Referral or service fees from approved providers.	Contracts, service levels and complaint processes.
Institutional procurement tools	Subscription or service charges for purchasing workflows.	Enterprise security, authorization and audit requirements.

Primary Global Advantage

JokogSphere1 can turn local enterprise into discoverable digital commerce while giving buyers broader choice and structured transaction pathways. Its global strength will depend on trust, category governance, payment separation, delivery partnerships and reliable dispute resolution.

FLAGSHIP TWO

SkillSphereHub2

Skills development learning delivery and certification

Global Purpose

SkillSphereHub2 is intended to connect learners with practical education, qualified instructors, assessments and verifiable certificates. It supports knowledge that can be applied to employment, enterprise, professional services and lifelong development.

Four Delivery Modes

Mode	Experience	Global value
Self Paced Online	Learners progress through structured digital content and assessment.	Affordable access across time zones.
Live Online Instructor Led	Scheduled teaching, interaction and guided learning.	Global classroom participation.
In Person Instructor Led	Approved centres, cohorts, schedules and attendance.	Serves communities with limited connectivity or practical training needs.
Hybrid Learning	Coordinated online and physical participation.	Combines reach, flexibility and verifiable attendance.

Global Expansion

- Approve instructors and courses through transparent quality criteria.
- Support multilingual content, captions, accessible learning and regional schedules.
- Establish approved learning centres and verifiable QR or OTP attendance after platform clearance.
- Develop employer, institution and government learning partnerships.
- Create pathways from course completion to WorkProof portfolios and Sphere1 service offerings.

Revenue Generation

Revenue channel	Model
Course sales	Paid enrolment; no permanently free full-course model unless approved for a strategic programme.
Instructor registration or verification	Disclosed fee for approved onboarding, subject to applicable rules.
Revenue share	Current planning basis: instructor receives 85 percent and platform receives 15 percent, subject to final commercial policy.
Institutional programmes	Contracted learning, workforce development and cohort delivery.
Certification and premium services	Permitted fees for assessment, certificate services, analytics or advanced learner tools.
Advertising	Carefully placed, clearly disclosed advertising with frequency limits and learning experience protections.

FLAGSHIP THREE

JokogWealthNexus

Financial literacy wealth education and enterprise capability

Global Purpose

JokogWealthNexus is intended to help people understand budgeting, saving, responsible planning, entrepreneurship, business finance and long-term wealth-building principles. It is an education platform, not a promise of profit and not an unlicensed investment-management service.

Global Expansion

- Create practical programmes for different income levels, life stages and local realities.
- Localize examples, consumer warnings and regulatory notices by jurisdiction.
- Develop educator-led cohorts, classroom centres and responsible financial capability programmes.
- Partner with schools, employers, community organizations and financial-literacy initiatives.
- Connect business learners to SkillSphereHub2 training and JokogSphere1 enterprise opportunities.

Revenue Generation

Revenue channel	Model and safeguards
Programme enrolment	Fees for structured financial-education programmes and assessments.
Educator led cohorts	Revenue sharing on approved live, in-person or hybrid programmes.
Institutional licensing	Financial capability programmes for employers, schools, NGOs and public institutions.
Premium planning tools	Subscription for permitted educational calculators, trackers and structured learning plans.
Sponsored education	Clearly disclosed sponsorship by suitable partners without compromising teaching independence.

Primary Global Advantage

The platform can make financial knowledge more practical and accessible, especially where everyday people need guidance before they can use commercial or investment opportunities

responsibly. Trust depends on clear education-only boundaries, evidence-based content and jurisdiction-specific disclosures.

FLAGSHIP FOUR

JokogDigitalWorkProof

Structured work records evidence and counterparty confirmation

Global Purpose

JokogDigitalWorkProof helps people and organizations create structured records of work, define milestones, attach evidence and invite a counterparty to confirm or dispute a frozen snapshot. It improves credibility without falsely claiming that every record has been independently verified by JOKOG DIGITAL ECOSYSTEMS LIMITED.

Users and Use Cases

User	Example	Likely counterparty
Freelancer or professional	Design, consulting, construction support or technical assignment.	Client, project manager or contracting organization.
Employee or contractor	Defined deliverable, project phase or temporary engagement.	Employer, supervisor or authorized representative.
Business or institution	Supply, programme, construction, training or service-delivery record.	Customer, funder, partner, regulator or beneficiary representative.
Government or NGO	Public project, programme milestone or contracted delivery.	Contractor, oversight body, community representative or funding partner.

Global Expansion

- Introduce organizational accounts, teams, role-based authority and institutional record ownership.
- Add permissioned public portfolios, share links, exports and future certificate-style summaries.
- Develop optional professional review services without converting member statements into company guarantees.
- Integrate eligible SkillSphereHub2 certificates and link service providers to Sphere1 listings.
- Support jurisdiction-aware retention, privacy, evidence and electronic-signature rules.

Revenue Generation

Revenue channel	Model
Membership plans	Tiered access based on active records, evidence storage, sharing and exports.
Organization subscriptions	Seats, teams, projects, permissions, reporting and administration tools.
Record or verification services	Disclosed fees for permitted advanced confirmation, review or document-generation services.
Storage and retention	Additional evidence capacity and longer controlled retention.
Enterprise integration	API, onboarding, support and customized workflow fees.

FLAGSHIP FIVE

JokogConnect

Social utility needs solutions communication and opportunity discovery

Global Purpose

JokogConnect is designed as a social-utility platform where people, organizations, institutions, churches, communities and service providers can communicate around practical needs. Its distinguishing idea is not endless social posting; it is structured movement from “I need” or “I can help” toward a trustworthy solution.

Proposed Core Modules

Module	Purpose
Social community	Profiles, posts, groups, reactions, comments, following and controlled messaging.
I Need and I Can Help	Structured requests by category, location, urgency and budget, matched to relevant solutions.
Meetings and events	Invitations, registration, webinars, seminars, attendance and future paid events.

Opportunity centre	Jobs, contracts, training, grants, collaborations, volunteering and community initiatives.
Knowledge and help	Questions, practical guides, expert discussions and responsible AI-assisted discovery.
Organization pages	Verified pages for businesses, schools, churches, NGOs, institutions and public bodies.
Safety and moderation	Reporting, blocking, content review, fraud controls and appeal workflows.

Phased Development

Phase	Scope	Release condition
Minimum viable product	Profiles, posts, needs, matching, groups, messaging, notifications, reporting and administration.	Approved requirements, safety policy, privacy design and acceptance tests.
Ecosystem links	Controlled referrals to the four specialist applications.	Consent model, API controls and product-boundary testing.
Meetings and opportunities	Events, webinars, organization pages, jobs and subscriptions.	Proven moderation, support and billing operations.
Global capability	Languages, country discovery, broader payments and mobile apps.	Market evidence, legal readiness and sustainable operations.

Revenue Generation

JokogConnect may earn through optional individual and organization subscriptions, premium professional profiles, paid meeting and event plans, opportunity listings, clearly labelled sponsored content, enterprise community tools, organization verification services and referrals that convert into permitted activity within the specialist applications. Basic social participation should remain accessible enough to support network growth.

TECHNOLOGY AND OPERATING MODEL

Build Once Use Everywhere

Build Once Use Everywhere means creating approved capabilities as reusable services or standards so the company does not repeatedly pay to solve the same problem. It does not mean merging every database, wallet, payment flow or permission set into one uncontrolled system.

Build once	Reuse everywhere	Preserve separately
------------	------------------	---------------------

Design system and accessibility rules	Consistent navigation, forms, components and brand standards.	Each application logo, purpose and product experience.
Security baseline	Authentication hardening, logging, backups, incident handling and review checklists.	Keys, secrets, privileged roles and production environments.
Support framework	Knowledge base, ticket categories, service standards and escalation.	Product-specific cases and restricted records.
Notification service	Email, in-app and future push delivery patterns.	User consent, channel preference and product context.
Policy templates	Privacy, acceptable use, complaints, child safety, seller or instructor rules.	Jurisdiction and application-specific obligations.
Analytics standards	Common definitions for acquisition, activation, retention, revenue and safety.	Minimum necessary data and access controls.
Integration gateway	Documented APIs, consent receipts and audit events.	No direct unrestricted database sharing.

One User Many Legitimate Pathways

1. A person expresses a need or discovers an opportunity in JokogConnect.
2. The platform directs the person to the most appropriate specialist application.
3. The specialist application completes its own authentication, permissions, disclosures and transaction rules.
4. With consent, eligible outcomes such as certificates or work records may be referenced in another application.
5. The ecosystem learns from aggregated service outcomes while maintaining application and privacy boundaries.

Platform and Currency Separation

Pi-facing applications should continue to respect applicable Pi authentication, wallet and payment rules. Future public versions may add lawful fiat or approved digital-asset methods through separate configuration, accounting and user interfaces. No public payment option should be introduced into a Pi environment in a way that competes with, bypasses or confuses Pi requirements.

COMMERCIAL SUSTAINABILITY

How the Ecosystem Generates Revenue

The portfolio is stronger because revenue does not depend on one advertisement model or one application. Each flagship has a direct value exchange, while the shared infrastructure lowers duplicate operating costs.

Revenue family	Sphere1	Skills	Wealth	WorkProof	Connect
Transaction or enrolment fees	Marketplace commissions	Course sales	Programme fees	Advanced record services	Paid events or referrals
Subscriptions	Merchant plans	Learner or instructor tools	Premium learning tools	Individual and organization plans	Professional and organization plans
Institutional services	Procurement tools	Workforce learning	Financial capability programmes	Enterprise work-record systems	Community and meeting tools
Promotion	Featured listings	Approved course promotion	Disclosed sponsorship	Limited relevant promotion	Sponsored posts and opportunities
Partnerships	Logistics and service partners	Centres and educators	Education partners	Integration partners	Events and ecosystem discovery

Revenue Principles

- Charge for real utility, convenience, reach, administration, evidence or institutional capability.
- Display fees before commitment and maintain auditable payment and refund records.
- Do not allow sponsored placement to masquerade as independent ranking or verification.
- Separate company revenue from funds held or passed to merchants, instructors or partners.
- Measure unit economics before subsidizing global expansion.
- Avoid revenue models that create incentives for misinformation, unsafe content or unnecessary data collection.

Portfolio Advantages to the Company

Advantage	Strategic effect
Diversified demand	Commerce, education, financial capability, work and community needs do not rise and fall together.
Cross-application discovery	A legitimate need in one product can lead to value in another without forcing users into every app.
Shared capability investment	Common standards reduce duplication, credit usage and long-term maintenance cost.
Broader partnerships	The company can work with merchants, educators, employers, NGOs, institutions and governments.
Stronger brand purpose	The slogan is expressed through measurable services rather than advertising language alone.

Roadmap from Nigerian Foundation to Global Relevance

Period	Priority	Portfolio milestones
2026 Foundation and Review	Protect compliance and document the future.	Maintain the four submitted products; resolve portal, wallet and review dependencies; complete JokogConnect specifications; preserve test evidence; complete corporate compliance foundations.
2027 Stabilization and Nigerian Pilot	Prove usefulness and operating discipline.	Controlled public pilots; customer support; pricing validation; fraud and moderation operations; initial organization accounts; Hybrid Classroom delivery after relevant clearance.
2028 to 2029 African Expansion	Localize and partner.	Enter selected African markets based on demand and legal readiness; multilingual content; regional payments and logistics; institutional learning, marketplace and work-record partnerships.
2030 to 2032 Multi Region Growth	Scale interoperable services.	Broader country coverage; enterprise integrations; mature shared identity and consent layer; mobile apps where demand justifies them; stronger data residency and regional compliance.
2033 to 2036 Global Institution	Build resilience beyond individual products.	Diversified revenue; international partnerships; leadership succession; mature governance; responsible AI; measurable generational impact.

Market Entry Gate

A country or sector should not be entered merely because the technology can be opened there. Entry should require evidence across the following gates:

Gate	Minimum question
Demand	Is there a defined user problem and evidence of adoption or a committed partner?
Compliance	Are corporate, tax, privacy, consumer, payment and sector obligations understood?
Operations	Can support, moderation, complaints, refunds and incidents be handled locally?

Economics	Can revenue support acquisition, compliance, infrastructure and service delivery?
Trust	Are verification, safety, partner quality and public communications credible?
Technology	Can performance, language, accessibility, security and data requirements be met?

Expansion Sequence for Each Flagship

Application	Nigeria pilot	African growth	Global scale
JokogSphere1	Merchant quality, categories, delivery and dispute process.	Regional sellers, logistics and local payments.	Cross-border catalogues, procurement and multilingual marketplace.
SkillSphereHub2	Course quality, instructors, centres and outcomes.	Regional cohorts, institutional training and language access.	Global instructor network and recognized learning partnerships.
JokogWealthNexus	Practical local financial education.	Country-specific programmes and partners.	Multi-jurisdiction literacy with strong disclosures.
WorkProof	Individuals, SMEs and initial organizations.	Institutional records and workforce partnerships.	Portable permissioned professional evidence and enterprise integrations.
JokogConnect	Safe MVP and community problem-solving.	Localized needs, organizations and events.	Multilingual discovery, meetings and global opportunity network.

HUMAN AND INSTITUTIONAL VALUE

Advantages for Everyday People Organizations and Institutions

Beneficiary	Practical advantages
Everyday people	Access to products, services, learning, financial education, opportunity discovery, communities and a structured record of completed work.
Professionals and freelancers	Service visibility, skills development, evidence-supported work history, client discovery and professional communities.
Merchants and small businesses	Digital storefronts, customer reach, business learning, workforce development, organization pages and commercial records.

Educators and learning centres	Course delivery, learner management, income opportunities, attendance evidence and wider geographic reach.
Employers and institutions	Training, procurement, workforce records, organization communication, events and permissioned verification.
Churches NGOs and communities	Meetings, seminars, announcements, volunteering, needs coordination, training and trusted service discovery.
Government and public bodies	Potential channels for approved programmes, public opportunities, training, procurement and project-record coordination, subject to formal agreements and law.

The Company Slogan as an Operating Promise

Slogan commitment	How the ecosystem delivers
Connecting People	JokogConnect forms communities and discovers needs; Sphere1 connects buyers and sellers; Skills and Wealth connect learners and educators; WorkProof connects work owners and counterparties.
Creating Opportunities	Trade, learning, professional visibility, organization tools, jobs, collaborations, enterprise development and practical knowledge create multiple pathways to participation.
Building Generations	Skills, trustworthy records, financial capability, sustainable businesses, responsible governance and reusable technology can create value that outlives a single transaction or leader.

The slogan becomes credible when these benefits are measurable: users complete useful transactions, learn applicable skills, improve financial decisions, document real work, obtain help, form partnerships and build sustainable institutions.

GOVERNANCE SECURITY AND TRUST

Controls Required for Sustainable Growth

Area	Required control
Corporate governance	Board-approved strategy, delegated authority, conflict management, records and periodic performance review.
Product governance	Named product owners, versioned requirements, acceptance tests and controlled release decisions.

Security	Role-based access, secret separation, logs, backups, vulnerability handling, incident response and periodic testing.
Privacy	Data minimization, user rights, consent, retention schedules, cross-border assessment and restricted access.
Payments and finance	Environment separation, reconciliation, refunds, revenue allocation, tax records and partner settlement.
Marketplace trust	Merchant review, prohibited items, dispute handling, transparent ranking and consumer protection.
Learning quality	Instructor and course review, assessment integrity, certificate controls and complaints.
Content and community safety	Reporting, moderation, anti-fraud controls, child safety, appeals and emergency escalation.
Financial education boundaries	No guaranteed returns, misleading claims or unlicensed regulated service.
Work-record integrity	Clear distinction among member-recorded, counterparty-confirmed and independently reviewed information.

Measures of Progress

Dimension	Example measures
Utility	Completed transactions, course completion, confirmed work records, resolved needs and successful events.
Trust	Dispute rate, fraud reports, moderation time, refund time, security incidents and complaint resolution.
Inclusion	Geographic reach, mobile usability, language coverage, accessibility and participation by smaller enterprises.
Economics	Revenue by product, contribution margin, partner settlement accuracy, retention and acquisition cost.
Institutional growth	Active merchants, instructors, organizations, centres, employers and strategic partnerships.
Generational impact	Skills applied, enterprises supported, work histories established and repeat beneficial participation.

Immediate Management Priorities

- Maintain the production freeze on the four Pi-submitted applications except for genuine defects, security issues or required compliance changes.

7. Consolidate the latest specifications, policies, architecture and launch materials for every application in controlled documents.
8. Approve the JokogConnect minimum viable product, safety model, account categories and revenue rules before coding.
9. Define shared infrastructure interfaces and data boundaries before building cross-application features.
10. Prepare one controlled Nigerian pilot plan per product, including support, pricing, metrics and stop conditions.
11. Review legal, data-protection, tax, payment and sector obligations before opening any new public channel or jurisdiction.

A Connected Institution for Practical Opportunity

JOKOG DIGITAL ECOSYSTEMS LIMITED has the advantage of approaching everyday needs as one connected journey rather than five unrelated products. People can discover solutions, trade, learn, strengthen financial capability and build credible work histories. Organizations and institutions can communicate, train, procure, coordinate and document outcomes through purpose-built applications.

The opportunity is substantial, but the long-term value will come from disciplined execution: useful products, clear boundaries, responsible revenue, strong governance, public trust and expansion based on evidence. If these principles remain intact, the company can grow from a Nigerian technology enterprise into a globally relevant institution that connects people, creates opportunities and builds generations.
